

## ABSTRACT OF THE DISCLOSURE

An automobile light with an auxiliary spotlight diaphragm includes a light base, a spotlight diaphragm and a light cover. The light base is provided with a light source body therein, and the spotlight diaphragm is pivotally provided around the outer circumference of the light source body. The characteristic of the present invention lies in that the spotlight diaphragm is composed by a first light-reflection portion, a second light-reflection portion, a third light-reflection portion and a flickering diode. At least one hollow is provided in a predetermined position of the first light-reflection portion, so as for the flickering diode to be inserted through and inlaid in the second light-reflection portion.
